OVERVIEW

- Backend Developer with nearly 2 years of experience, primarily focusing on Node.js (NestJS) and TypeScript.
- Hands-on experience in building RESTful APIs, managing MongoDB/MySQL databases, and implementing real-time features; possess a foundational understanding of React.
- Dedicated to delivering high-quality project value while continuously refining problem-solving skills in a professional environment.

SKILLS

Languages & Frameworks	JavaScript, TypeScript, Node.js (NestJS, Express), ReactJs
Databases	MongoDB (Mongoose), MySQL (Sequelize), PostgreSQL (Prisma).
Tools & Cloud	Docker, BullMQ, Redis, Google Cloud, Firebase.
Others	RESTful API, GraphQL, Socket.IO, JWT, Scrum/Agile, Socket.io, ability to read and understand English, Teamwork & communication.

WORK EXPERIENCE

Madison Technologies - Backend Developer Feb 2024 - Present

Project: GDOS Platform (Comprehensive Construction Management)

Brief Summary:

- A large-scale platform managing construction operations, including personnel, finance, project tracking, and quality auditing.

Responsibilities:

- System Architecture: Maintained a Monorepo structure using NestJS and TypeScript to streamline development across multiple submodules.
- Process Automation (She Audit): Designed an automated workflow for quality control; implementing Webhooks and third-party services to generate PDF audit reports, reducing manual reporting time.
- Data Synchronization: Developed background jobs using BullMQ to synchronize large datasets from legacy systems (ACC) and third-party platforms, ensuring data consistency across the platform.
- Access Control & Security: Implemented complex Role-Based Access Control (RBAC) to manage permissions for various stakeholders, from field engineers to high-level managers.
- Database Optimization: Defined and optimized MongoDB schemas to handle diverse data types (finance, incidents, and audit checklists), improving query performance for real-time reporting.

Technology in use: NestJS, MongoDB (Mongoose), BullMQ, Google Cloud Storage, Webhooks, RESTful API.

Project: GL-APP

Brief Summary:

- Enterprise residential management platform serving 50,000+ residents across 100+ properties in Vietnam and Malaysia.
- Enables community service access, emergency response, facility bookings, visitor management, and property administration through integrated mobile and web applications.

Responsibilities:

- Built 200+ RESTful APIs for resident services, emergency response (panic button with 60% faster response), facility bookings (1,000+ monthly), and visitor management (1000+ entries monthly).
- Implemented role-based access control with 5-level area hierarchy supporting multi-region operations across Vietnam and Malaysia.
- Integrated Firebase Firestore for real-time notifications and chat, plus external system integrations (OP CRM, Clubon) via BullMQ.
- Optimized complex area-based queries using recursive CTEs.
- Established coding standards, comprehensive API documentation, and data export functionality with timezone-aware formatting for compliance reporting.

Technology in use: NestJS, PostgreSQL (Prisma) | Firebase Firestore, BullMQ, Redis, Google Cloud Storage.

Enable Startup Company - Backend Intern Jun 2023 - Sep 2023

Project: Move Project

Brief Summary:

- Move Project is a web platform for fitness and health videos.
- Regular users can browse and filter content, interact (like/dislike, comment, follow), upload videos,...
- Admins manage videos, moderate content, view daily upload statistics, and ban/unban users.

Responsibilities:

- Built RESTful APIs with Express.js and MySQL (Sequelize).

- Integrated Cloudinary for image storage.
- Implemented JWT-based authentication/authorization with Redis session storage.
- Deployed backend on Ubuntu VPS (PM2, Nginx).
- Followed Scrum (sprint planning, daily stand-ups, task tracking on ClickUp, sprint demos) Firestore.

Technology in use: Express.js, MySQL (Sequelize), Redis, Vimeo SDK, Cloudinary, JWT, Socket.IO, PM2.

PERSONAL PROJECT

Enterprise Management System (Feb 2025 - Present)

Customer	Roberp
Description	A scalable SaaS platform providing comprehensive management solutions for organizations, including personnel tracking, payroll, recruitment, and a Super Admin layer for multi-company management.
Team size	5
My position	Frontend & backend developer
My responsibilities	• Developed scalable GraphQL APIs using Python (Django) to handle complex data relationships across various business modules. • Designed and implemented a granular RBAC system to ensure secure permission management for sensitive HR and financial data. • Built a Multi-tenant architecture to ensure complete data isolation and security between different client organizations. • Integrated automated scheduling and notification systems for employee shifts and leave requests. • Collaborated on frontend integration using Apollo GraphQL and React.
Technologies used	Python (Django), PostgreSQL, GraphQL, Apollo Client, ReactJS

EDUCATION

Duy Tan University - *Bachelor of Information Technology* Aug 2019 - Jul 2023
GPA: 3.1/4
